To All People Who Have Been Vaccinated

〈Be careful〉

Even after vaccination, you can still become infected with COVID-19.

The preventive effect is as high as about 95%, but it takes 1-2 weeks from the second vaccination to show the effect. One vaccination is not enough.

In addition, after the second vaccination, infection cannot be prevented 100%.

"Wear a mask"

"Wash or sanitize your hands"

"Not only avoiding 3 C's, even only 1 in 3 C's should be avoided"

"Stop when you are not feeling well"

please continue with the Steps of Implementing the "New Behavior Guidelines"

For more information about the COVID-19 vaccine,

Please check the website of the Ministry of Health, Labor and Welfare..
